DATA ANALYST

Internship Task Presentation

By: Aditya Kumar Sharma

ShadowFox Internship | August Batch 1

OVERVIEW

Contents

SECTION 01

Acknowledgement

I would like to express my gratitude to ShadowFox for giving me the opportunity to work on real-world, progressively challenging data analysis tasks during this internship.

I would also like to extend my thanks to my mentor, Mr. Aakash, for guidance and feedback throughout this experience.

All tasks were completed independently by me. Public datasets (Kaggle) were used for analysis, and Claude (Anthropic) was used as an assistant for research, troubleshooting, and reference guidance throughout the process.

SECTION 02

Beginner Level

Retail Sales Dashboard — Excel

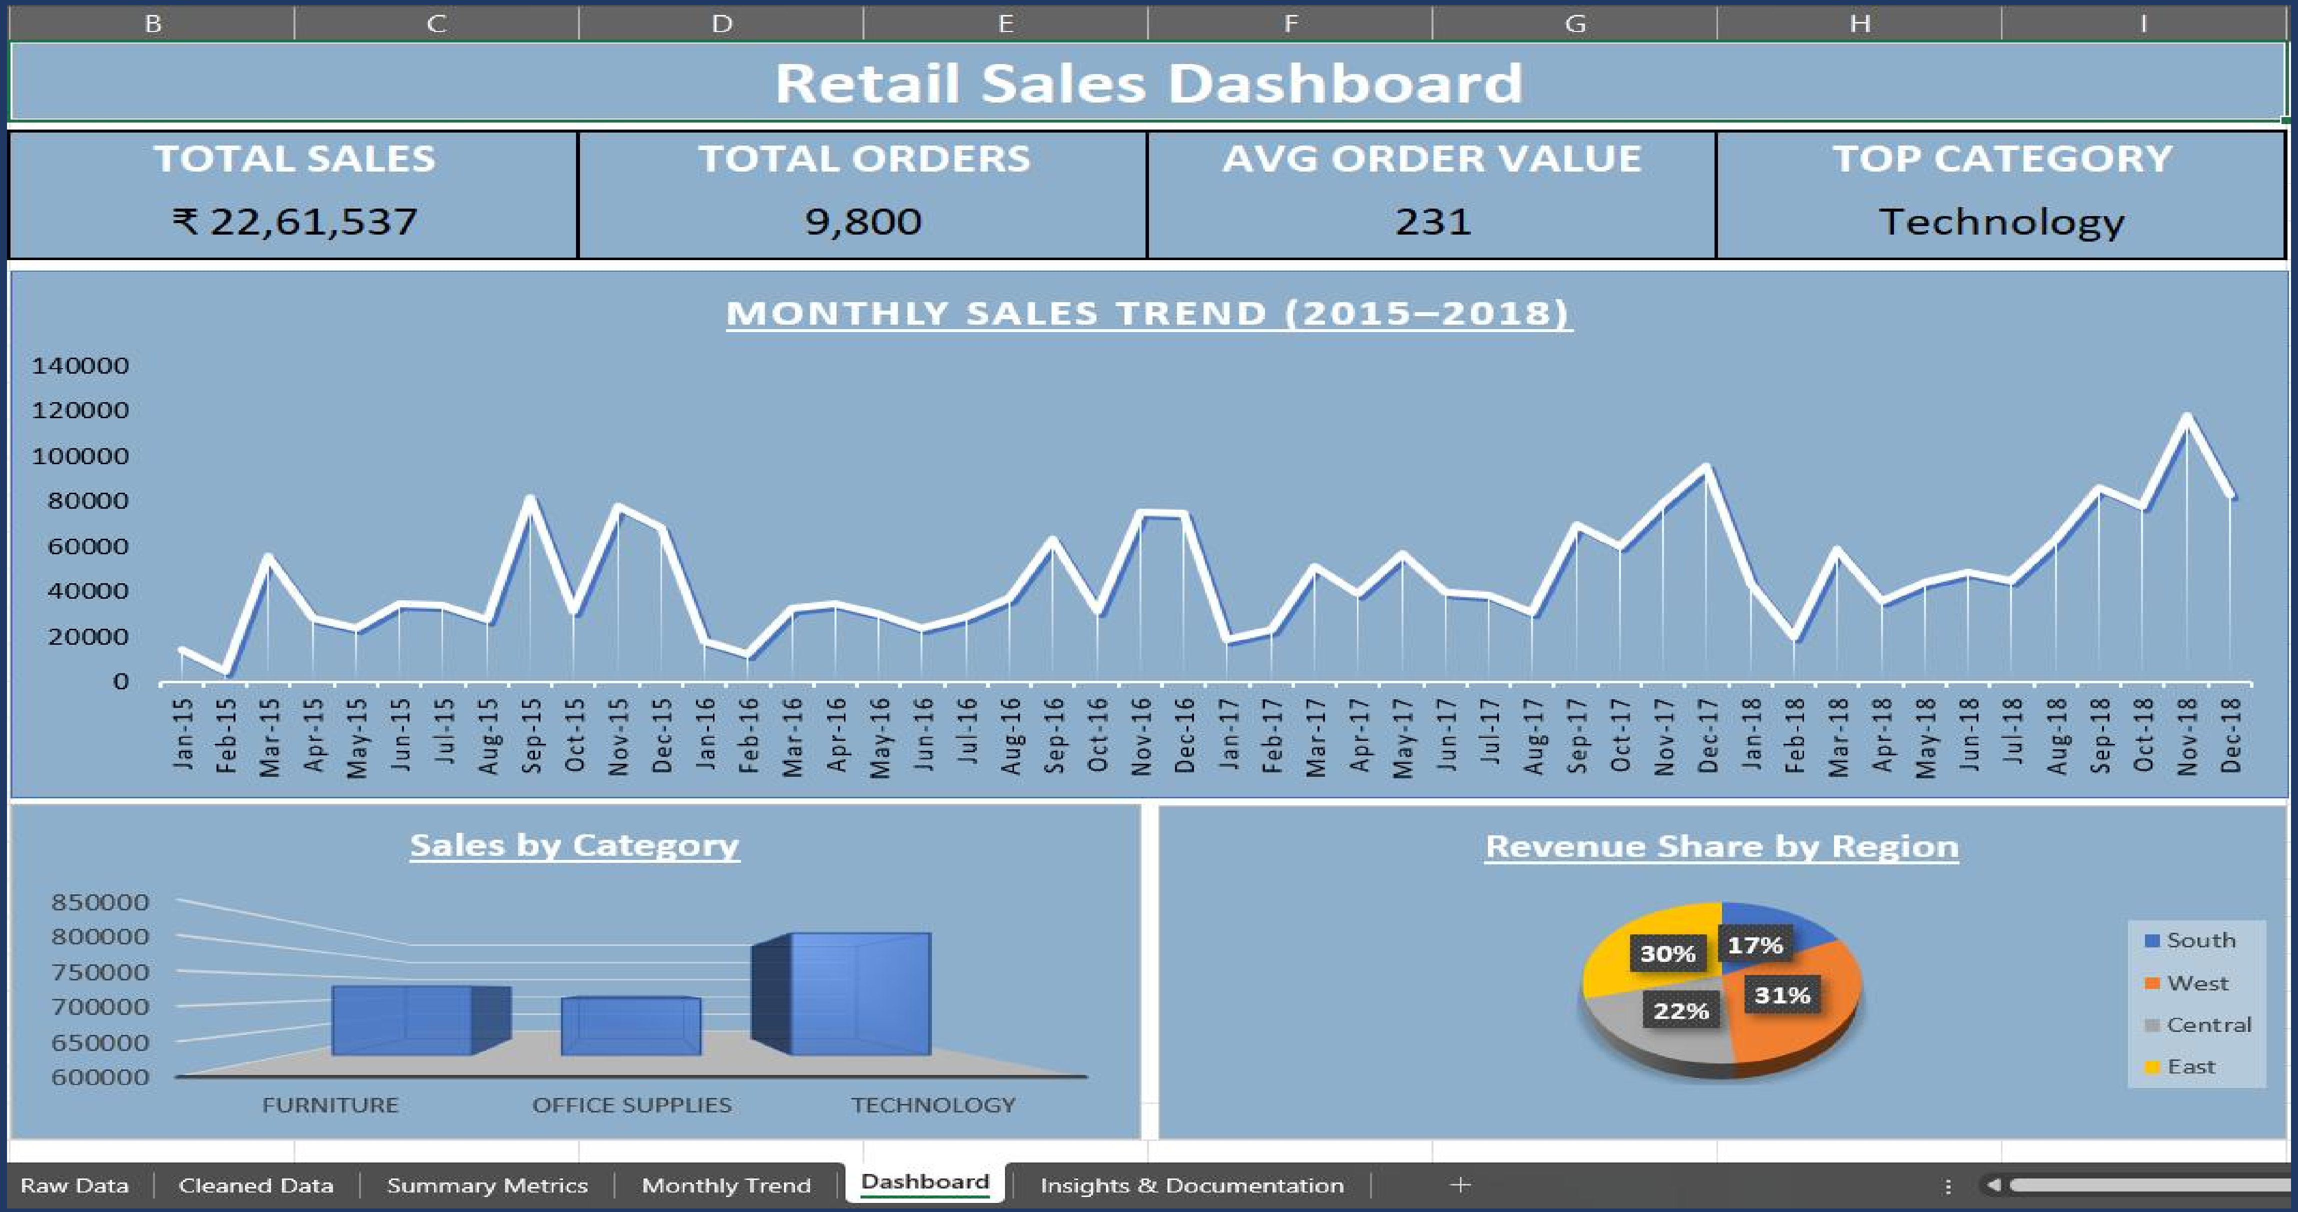
- Task: Analyze a retail sales dataset (Superstore, ~9,800 orders) and build a spreadsheet-based KPI dashboard.
- Cleaned raw data — handled date formatting, verified no duplicates or missing critical values.
- Calculated key metrics: Total Sales, Total Orders, Average Order Value.
- Built category-wise, region-wise, and monthly trend analysis with charts.
- Consolidated everything into a single-page dashboard with KPI cards.

KEY FINDING

Clear seasonal spike every September–November, with steady year-over-year growth from 2015 to 2018.

Tools: Microsoft Excel • SUMIF / SUMIFS / COUNTIFS
Dataset: Kaggle — Superstore Sales

Beginner Level — Final Dashboard



SECTION 03

Intermediate Level

Customer & Revenue Analysis — Excel

- Task: Move beyond summary reporting into customer behavior, segment performance, and revenue concentration.
- Customer analysis: 793 unique customers; top 10 customers = only 6.8% of revenue.
- Segment analysis: Consumer segment alone drives 50.8% of total revenue.
- Product analysis: 8 of 17 sub-categories generate 78% of total revenue.

KEY FINDING

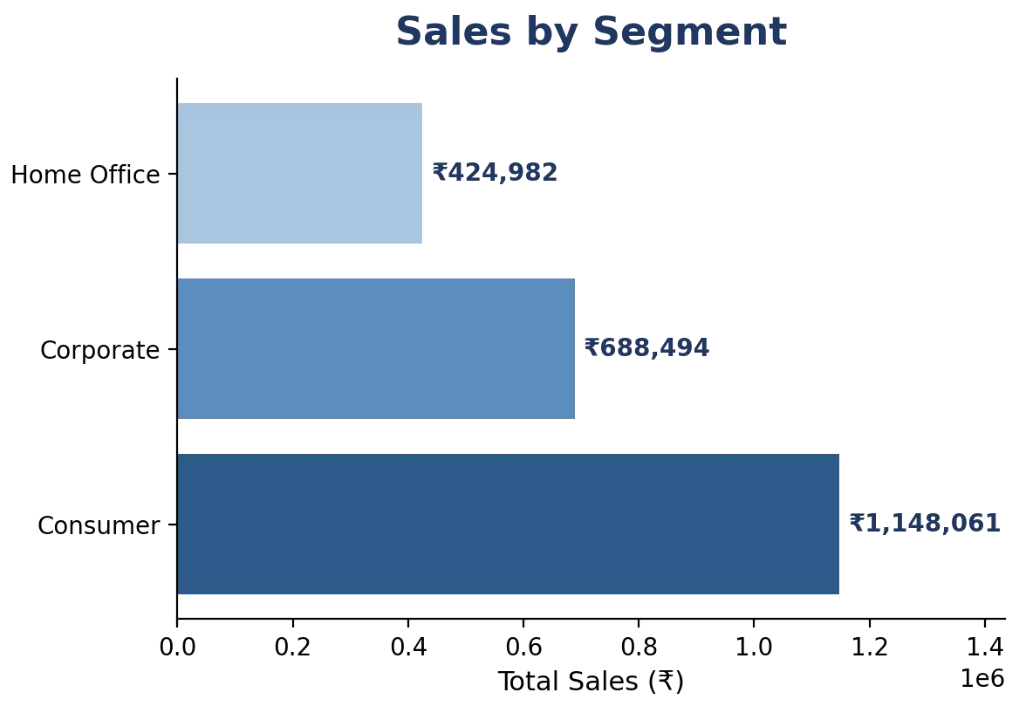
Revenue is well-diversified across customers (low concentration risk), but heavily reliant on the Consumer segment and a handful of top-performing sub-categories.

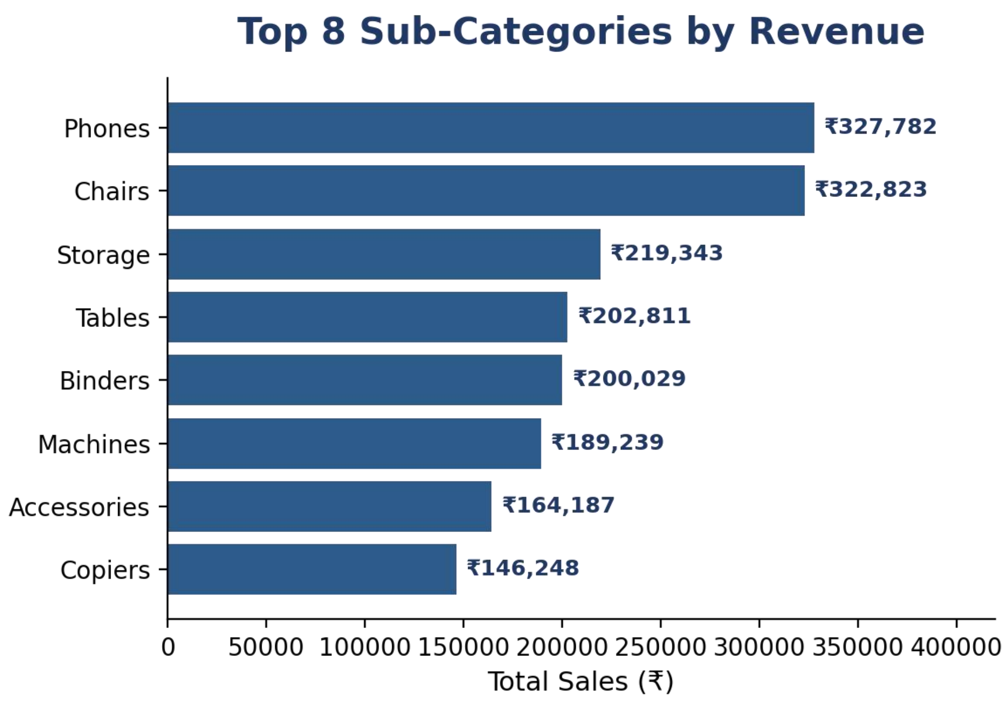
Findings converted into 6 data-backed business recommendations.

Tools: Microsoft Excel • SUMIF / COUNTIF

Dataset: Kaggle — Superstore Sales

Intermediate Level — Key Charts





SECTION 04

Advanced Level

Employee Attrition Dashboard — Power BI

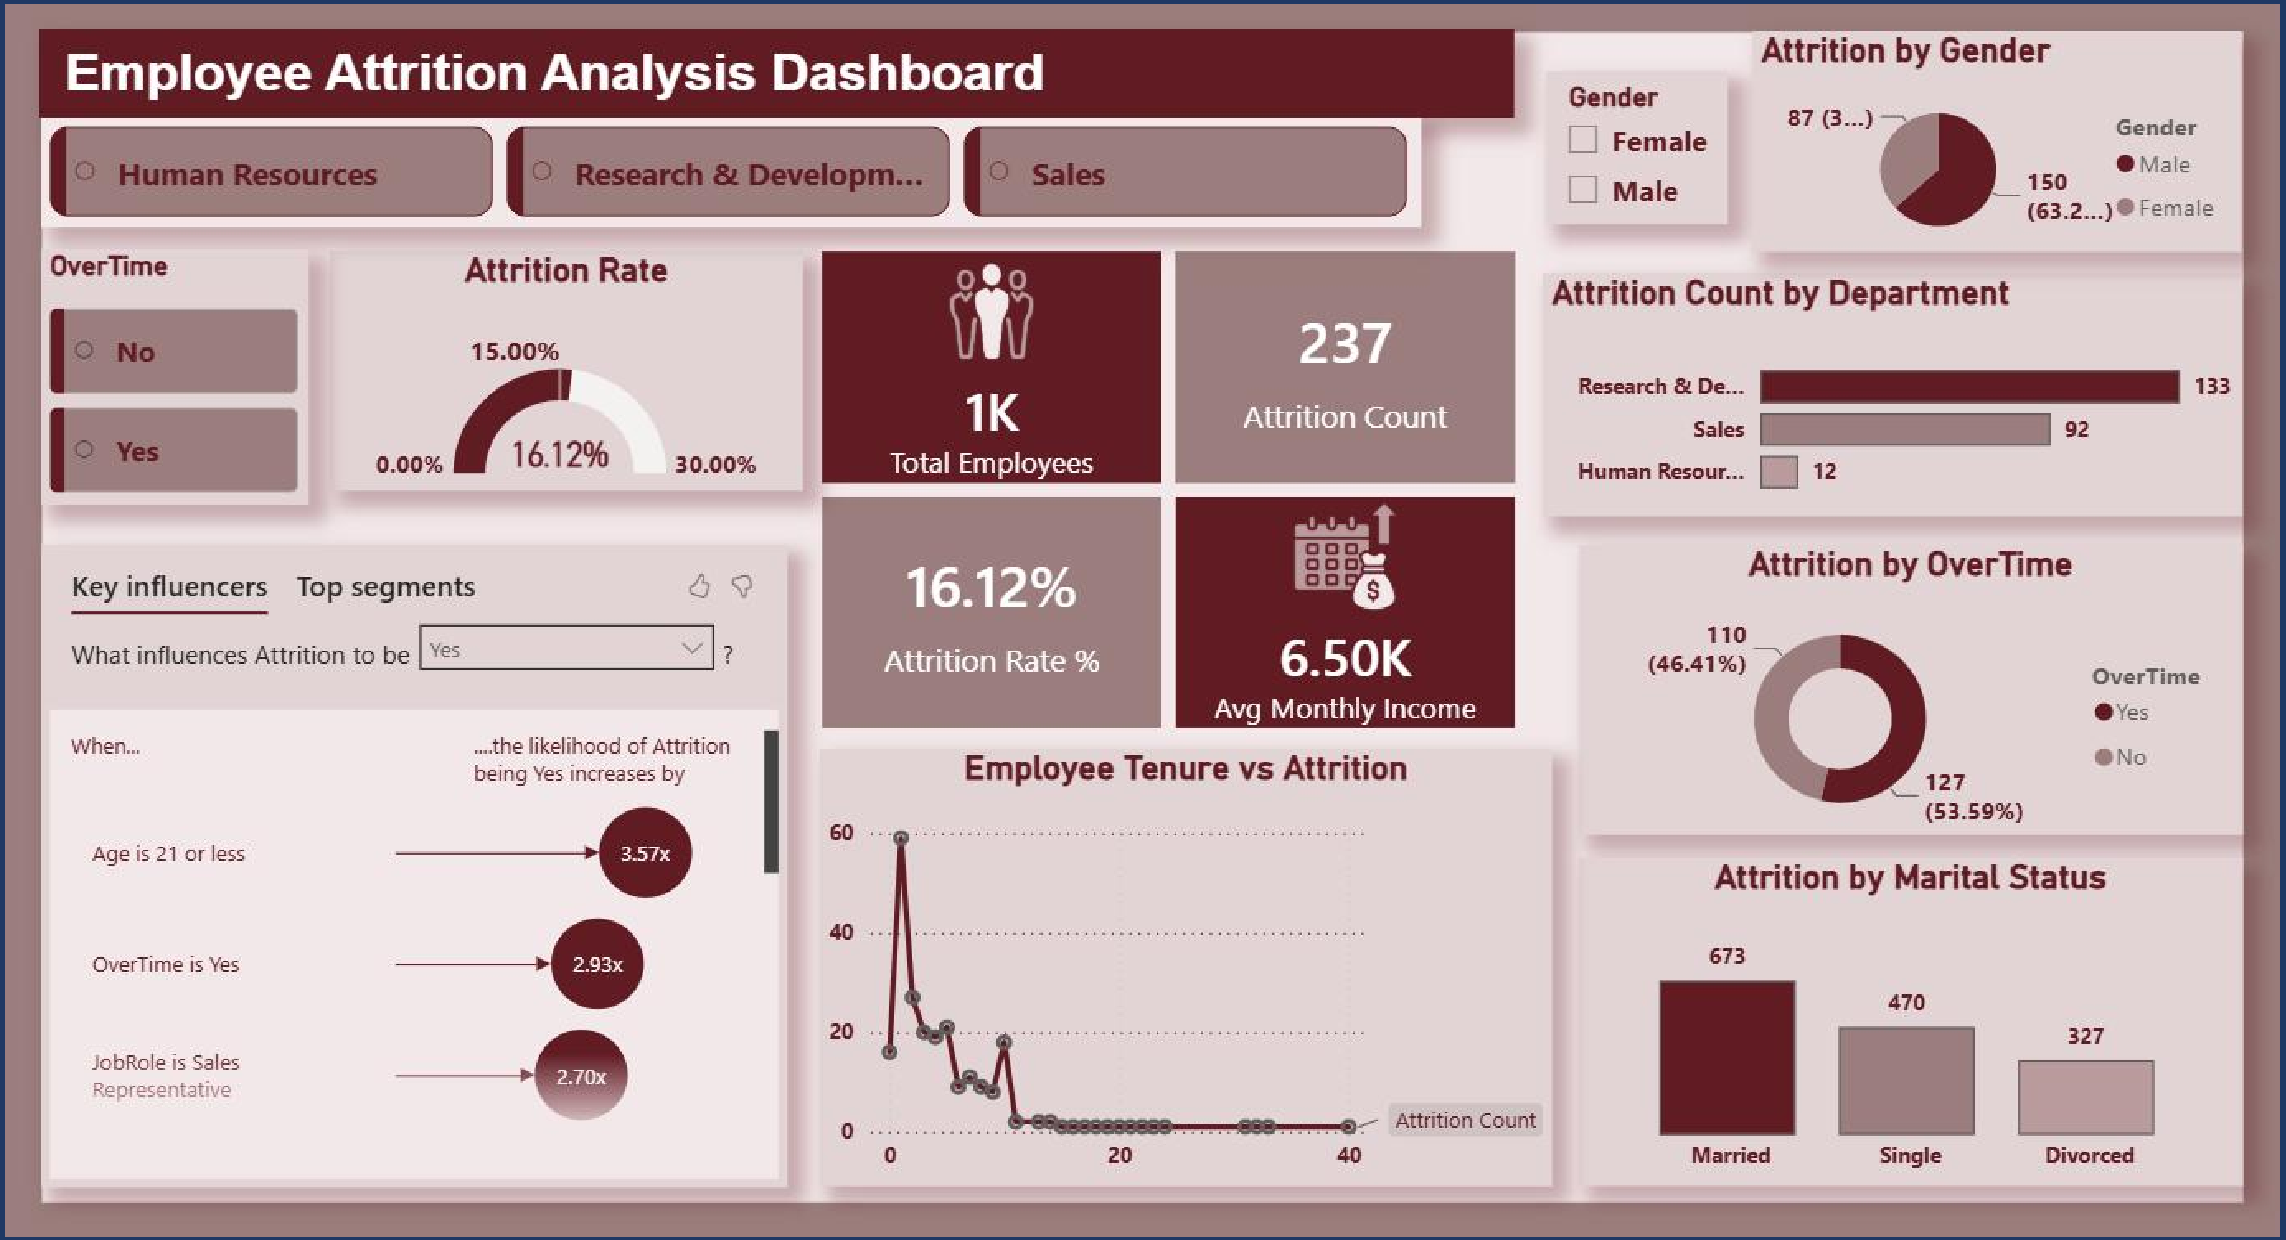
- Task: Build an executive-style, interactive dashboard using Power BI (IBM HR Analytics dataset, 1,470 employees).
- Cleaned data via Power Query; removed constant columns (EmployeeCount, Over18, StandardHours).
- Built 10+ DAX measures: Attrition Rate, department/segment breakdowns, average income, etc.
- Visuals: KPI cards, Attrition Rate gauge, bar/donut/line charts, AI-powered Key Influencers.
- Interactive slicers (Department, Gender, OverTime) with full cross-filtering.

AI KEY INFLUENCERS

- **Age ≤ 21 → 3.57x risk**
- **OverTime = Yes → 2.93x risk**
- **JobRole = Sales Rep → 2.70x risk**

Tools: Power BI Desktop • Power Query • DAX
Dataset: Kaggle — IBM HR Analytics Attrition

Advanced Level — Final Dashboard



SECTION 05

Conclusion

This internship took me from basic spreadsheet reporting to building a fully interactive, insight-driven Power BI dashboard. Each level built directly on the skills of the one before it — the Beginner level established a foundation in data cleaning and formula-based reporting; the Intermediate level pushed toward deeper business interpretation through customer and segment analysis; and the Advanced level introduced professional BI tooling and AI-assisted insight discovery.

Technical Growth

Excel formulas, Power BI, Power Query, and DAX — hands-on, job-ready tooling.

Business Thinking

Learned to ask not just what the data shows, but why it matters and what to do about it.

Structured Reporting

Practiced turning raw analysis into a clear narrative for real decision-makers.

THANK YOU

Aditya Kumar Sharma | Data Analyst Intern, ShadowFox
